

HOYA occupational lenses are specially designed for near and intermediate visual tasks, and are not intended for tasks which require far distance visual support, e.g. driving or for sport activities. Please discuss your vision needs with your eye care professional.

HOYA Occupational Lenses:

- Provide wider fields of view for near and intermediate distances, compared to progressive lenses.
- Provide improved vision comfort and allow better ergonomic posture during near and intermediate distance activities.
- Enable the wearer to have less head movement, more relaxed vision and less digital eye strain.

BLUE

CONTROL

Filters blue light for less eye strain and fatigue, and more relaxed vision when viewing digital devices.

Speak to your local eye care professional to find the ideal HOYA lenses for you.

HOYA
FOR THE VISIONARIES

**The right tools
for the right vision**

HOYA Occupational Lenses

HOYA
FOR THE VISIONARIES

The proper tools can make work more efficient, accurate, and comfortable. The right lenses can do the same for your eyes, especially if you work indoors.

Occupational lenses are specifically designed to provide more comfortable vision at close to intermediate distances. They are well-suited to all work and hobby activities, which require sharp vision at near and variable intermediate distances. By enabling a more comfortable and natural viewing stance, they also offer support for your ergonomic posture.

Premium lenses designed for the clearest, most comfortable & natural vision for your specific needs

For the most demanding spectacle wearers who work or spend long periods of time indoors, switching between different digital devices at near and intermediate distances. Provides optimised visual performance for your exact prescription, easy adaptation and for natural viewing.

Designed for wide near & computer viewing, to 2m or 4m

A very good solution for progressive lens wearers who would like even wider vision areas when working on near and intermediate vision distances. Perfect for office work, hobbies or when you spend most of your time indoors.

Designed for near & computer viewing up to 4m

If you wear progressive lenses but spend a lot of time working at your computer or in near vision activities, Hoyalux WorkSmart Room can provide you with extra wide clear vision and greater comfort. You will be able to switch effortlessly between your computer screen and keyboard, whilst having a perfect overview of your desk all day long.

Designed for heavy readers

These lenses offer support at near distances and have a much better depth than ordinary reading lenses. They are the ideal solution if you are a prolific reader of books or digital reading devices. SUPERREADER lenses are also ideal for you if you wear progressive lenses but spend intensive hours on close vision activities.
