HOYA
FOR THE VISIONARIES

The remarkable effect of polarised lenses

HOYA polarised lenses deliver the ultimate visual experience. Truer colours are revealed. Vision is vibrant. Details are precise. Discomforting and dangerous blinding glare is eliminated by the absorption of horizontal light waves

HOYA polarised lenses are highly recommended for everybody. They're especially beneficial when near highly reflective surfaces such as roads, water, snow and grass. HOYA polarised lenses are also available with mirror or light mirror coatings.

Shine in the sun

HOYA mirror lenses add a radiant, edgy look to your sunglasses – instantly transforming your appearance. They're available on a wide range of HOYA tinted and polarised sunglass lenses.

Mirror coatings

HOYA mirror coatings are available in three eye-catching colours: gold, silver and blue.

Light mirror coatings

For a more subtle mirror look, there are four light mirror coating colours to choose from: silver, copper, blue and violet.

For enhanced performance & protection

Hi-Vision SUN Pro coating is highly recommended for HOYA tinted and polarised lenses.

- Delivers the highest, double-sided UV protection with UV blocked from the front and reflected UV neutralised from the back surface.
- Provides double-sided high scratch resistance, to protect your lenses.
- Is water, grease and dirt repellent on both sides, for easy cleaning.
- Removes unwanted colour reflections and provides better visual contrast.

Speak to your local Eyecare Professional to find the ideal HOYA lenses for you.
